

## Hawkweeds of south-east England

### Errata

**Page 26.** Key to Sections.

The two lines in couplet 6 have been transposed. The following is correct:

6. Stem leaves 0-1(-2); basal leaves numerous..... *Hieracium* (p. 173)  
6. Stem leaves 2-8; basal leaves usually few ..... **7**

The word 'with' in the first line of the second part of couplet 7 should read 'without'. The word 'simple' in the first line of each part of the couplet should read 'eglandular'. The following is correct:

7. Leaves with  $\pm$  rigid eglandular hairs on the margins; inflorescence mostly furcate-corymbose; phyllaries mostly obtuse at apex, with a mixture of eglandular and glandular hairs, but eglandular hairs usually predominant (only one species—*H. angustisquamum*) ..... *Oreadea* (p. 97)  
7. Leaves without rigid eglandular hairs on the margins; inflorescence paniculate-corymbose or cymose-corymbose; phyllaries either obtuse or acute at apex, with a mixture of eglandular and glandular hairs, but glandular hairs usually predominant..... *Vulgata* (p. 102)

**Page 96.** The words 'without eglandular hairs' in the second line under the heading Section *Villosa* (Griseb.) Gremler should read 'without glandular hairs'.
