

TABLE OF CONTENTS

Introduction(s) along all my seminars	8
Our personal and educational targets	10
A list of abbreviations	10
About terminology	10
Part 1: the microscope	13
Which microscope to choose?	14
Components of a microscope	14
Refractive index (RI)	18
Why use Immersion Oil?	20
Some elements to guide your choice	21
Our master purchase	23
Procedure for carrying out a standard observation	23
Microscopy and photography	25
Superimposing photographs	29
Photography through a micrometric eyepiece	30
Spores: drawings or photographs?	31
Tools and storage flasks	34
Part 2: the basic equipment	35
First accessories	36
Microscope glass blades (GB) and their storage	36
Immersion oil	37
Cleaning the eyepieces and objectives	37
First observation	38
Observation media	39
Fluid media	39
Viscous media	41
Types of microscopic preparations	43
Extemporaneous microscopic preparations	43
Semi-definitive preparations	43
Assembly of uncoloured parts in definitive stained media	45
Definitive preparations	45

Definitive aqueous solvent media	46
Definitive media with benzene or keto solvent	47
A personal working protocol	49
Staining: limits and reality	50
Different types of staining	50
Nature and longevity of the dyes and reagents	52
About solutions in chemistry	54
Dissociation	55
Observation of fresh material	55
Drigalski's triangle	56
Exsiccata's observation	56
Softeners	57
A new softening liquid: G.S.M.	58
Protocol for performing a mycologic preparation	59
Washing the preparations	59
Improve the readability of a preparation	60
Improve the dissociation of hard elements	61
Cleaning the glass blades	62
Cuts for microscopy: a real problem	63
Freehand cuts	63
Freehand cuts with a support guide	64
Ranvier's microtome	64
A new cutting device for Ranvier's microtome	64
Genat's microtome	65
Small automated laboratory microtomes	66
A rapid inclusion's technique in paraffin	67
Leuckart's bars	67
Using epoxy resin for inclusion	68
Accidents of handling and problems with your preparations	77
Becke's line	82
Part3: mushrooms under a microscope	83
The secret life of a mushroom	84
Ascomycetes: asci and ascospores	85

Ascomycetes: operculated or not?	87
Reactions with iodine	88
Little drops, vacuoles and nuclei	89
Causing sporulation of an Ascomycete	92
Causing the birth of some Ascomycetes	93
Basidiomycetes: basidia and basidiospores	95
Some surprising basidia	97
Siderophilic basidia	99
A caulohymenium in the Boletales	101
About basidiospores	104
Reference models for the shape of the most common spores	105
Spore's shape and their ornamentation	106
How measuring spores?	107
Causing sporulation of a Basidiomycete	108
A protocol to observe the gills of a Basidiomycete	109
Spores and walls	110
Protocol for spore's observation	111
Repetitive spores	112
Chlamydospores	113
Basidiomycetes: other conidia	114
Spores and melzer	115
Cystidia	116
Observing hooked cystidia (on the gills of some Pluteus)	118
Chrysocystidia	119
Acrophysalides in Amanita	120
Trabecular cystidia and pseudoparaphysis	121
Cuticles	123
Protocol for the observation of a cuticular coating	131
Protocol for the observation of Basidiomycetes with partial or general veil	131
Cuticular pigments	132
Cuticular hairs	135
Hymenial sebum	136
Some special structures: acanthocytes and crystals	137

Trama of gills in the Basidiomycetes	138
Protocol for observing the trama of the Basidiomycetes	144
Types of hyphae in the Basidiomycetes	145
Protocol for observing the mushroom flesh	150
Aphyllorphorales	
Types of hyphae in the Aphyllorphorales	151
Microscopy of the Polypores and Corticiaceae	163
Boidin's A.M.A. reaction in the Aphyllorphorales	168
Back to the hyphae (structure and growth)	169
Different types of clamps (clamp connections)	172
arnivorous mushrooms (toxocysts and gliosphex)	173
A special study of Hohenbuehelia atrocoerulea	177
Special staining and observation techniques	178
Regressive staining	179
Acid-resistant incrustations in the genus Russula	180
Dermatocystidia in the genus Russula	183
Some dyes are too little used	185
Cresyl blue	185
Cyanophilia	187
Study of the genus Lepiota (spores)	189
Nigrosin	191
Azo black (Chlorazol black)	193
Giemsa's mixture	194
A novelty: the little blue pills	196
A double staining applied to the Basidiomycetes	198
Congo red + phloxin B	198
Azo black + phloxin B	200
A new type of staining for Morchella sp.	201
Ammonia, a valuable chemical and a reagent	202
Ammonia reaction in the genera Inocybe and Conocybe	202
Crystals of calcium oxalate	203
K.K.'s reaction in the genus Amanita	204
About Plants and Glomeromycetes: endomycorrhiza	206

Plants and Glomeromycetes (spores)	210
Orchidoid mycorrhiza	213
Parasitic fungi	215
“Rusts” or Urediniomycetes	215
“Coals” or Ustilaginomycetes	220
Powdery mildews or Erisyphales	222
Vine has many enemies	226
Mildews	227
Moulds (generalities)	228
Moulds under a microscope	230
Moulds and growing media	232
Moulds are not always our friends	235
Yeasts	243
Mycological microscopy job aid	245
Checklist for a little mycophilic chemist	254
General bibliography	259
Addendum: some types of basidia	260
